

README: “Colluding Against Workers”

by Vincent Delabastita and Michael Rubens

Overview

This file documents the programs and datasets used to generate the results in the paper. The programs were run using Stata 17 and MATLAB R2022b, but should equally work with older versions of Stata and MATLAB. The code was last run on an Intel-based MacBook Pro (2020 version, 2.0GHz quad-core 10th-generation Intel Core i5, Turbo Boost up to 3.8GHz, with 6MB shared L3 cache) with MacOS version 10.15.7. Using a computer with similar characteristics, the entire code should run within 10 hours.

Data Availability and Provenance Statements

Statement about Rights

- We certify that the authors of the manuscript have legitimate access to and permission to use the data used in this manuscript.
- We certify that the authors of the manuscript have documented permission to redistribute/publish the data contained within this replication package.

Summary of Availability

- All data are publicly available.

Dataset list

We provide all data used in our analysis in the `.xlsx` format, readable in Microsoft Excel or various open-source alternatives. These data were digitized by the authors of this manuscript, unless otherwise acknowledged. Any use of the data should acknowledge the underlying sources as well. We list the data files in alphabetical order:

- `employment_province.xlsx`: This file contains total employment counts by province, as from the Belgian population censuses following Buyst (forthcoming)
- `indices.xlsx`: This file contains index measures for the following variables (and their source): sector-level wages (Scholliers, 1995; Segers, 2003), cost of living (Scholliers, 1995; Segers, 2003), industrial and agricultural production (Gadisseur, 1979), sector-level employment (Buyst, forthcoming), coal trade volumes and values (Degrève, 1982), and aggregate production and labor statistics from the *Administration des Mines* (Wibail, 1934). The variables are also named according their source.
- `Leboutte 1991.xlsx`: This file contains figures on mortality in Belgian coal mining, as cited in Leboutte (1991).

- `postalcodes.xlsx`: This file contains the concordance table between communities and their postal codes.
- `revuedutravail_petroleum.xlsx`: This file contains market-year level lamp oil prices collected by the Belgian labor inspection services, derived from their annual reports (Office du Travail du Belgique, 1896–1913).
- `Société Générale.xlsx`: This file contains the yearly composition of the portfolio of the *Société Générale*. We thank Gertjan Verdickt and SCOB at the University of Antwerp for providing this data.
- `Statistiques_Grèves_DATA.xlsx`: This file contains year-level statistics collected by the Belgian labor inspection services on striking activity in both coal mining and industry overall, derived from their annual reports (Office du Travail du Belgique, 1896–1913).
- The folder `main/data/agriculture` contains the following data:
 - `Buyst forthcoming.xlsx` This file contains agricultural employment counts, as from the Belgian population censuses following Buyst (forthcoming).
 - `Degrève 1982 data final.xlsx` and `Degrève 1982 products.xlsx`: These files contain the Belgian trade statistics, derived from Degrève (1982). The former file also contains our manual codification of the traded products into the *Standard International Trade Classification* (SITC revision 2), which we converted into the *International Standard Industrial Classification of All Economic Activities* (ISIC revision 2) using the concordance table provided by Muendler (2009).
 - `Gadisseur 1979.xlsx`: This file contains an agricultural production index, derived from Gadisseur (1979).
- The folder `main/data/cartel` contains the following data:
 - `cartel_new.xlsx` This file contains the cartel membership identifiers, indicating participation in the *Syndicat des Charbonnages liégeois*.
 - `Membership Union.xlsx`: This file contains the yearly member lists of the *Union des charbonnages Liégeois* on a sheet-by-sheet basis, derived from their year reports (Union des charbonnages (...), 1869–1913).
- The folder `main/data/commuting-transport` contains the following data:
 - `commuting_data.xlsx`: This file contains firm-level data on its workers' place of residence, derived from Mahaim (1911).
 - `town_railconnections.xlsx`: This file contains the list of mining communities, which we manually linked to the opening years of (light) railway stops in the respective communities. Sources are the attached network maps of the yearly reports of the Belgian National (Light) Railways (Ministre des Chemins de Fer, Postes et Télégraphes, 1845–1913; Société Nationale des Chemins de Fer Vicinaux, 1888–1913), which we verified using the invaluable work by Quetelet Center (n.d.-b). We thank the Quetelet Center at the University of Ghent and Sven Vrielinck specifically for allowing access to the latter source.

- The folder `main/data/politics` contains the following data:
 - `town_politics_categories.xlsx`: This file contains the list of mining communities, and the political composition of their local elections of 1895 and 1899. We manually calculated these shares based on the work by Quetelet Center (n.d.-a). We thank the Quetelet Center at the University of Ghent and Sven Vrielinck specifically for allowing access to this source.
- The folder `main/data/population` contains the following data:
 - `town_popcensuses.xlsx`: This file contains the list of mining communities, and their respective population counts from the Belgian population censuses (Statistique de la Belgique, n.d.).
- The folder `main/data/production` contains the digitized mine-level reports of the *Administration des Mines* on a year-by-year basis. The respective files, which are stored in the subfolder `data sheets`, are named after their number in the inventory guide of the State Archives of Belgium (Administration des Mines, 1831–1933). For example, `DATA_Series 196.xlsx` contains the data from Series 196 for year 1869. We refer to `README - Data entry - Administration des Mines.docx` for more information on the data entry procedures. This folder also contains seven Stata do-files which are called and documented in `dr_data.do` (see below).

Computational requirements

Software Requirements

- The programs were run using Stata 17, but should equally work with older versions of Stata.
 - The package `estout` should be installed and can be installed using the following command: `ssc install estout, replace`.
 - The package `ftools` should be installed and can be installed using the following command: `ssc install ftools, replace`.
 - The package `ivreg2` should be installed and can be installed using the following command: `ssc install ivreg2, replace`.
 - The package `ivreghdfe` should be installed and can be installed using the following command: `ssc install ivreghdfe, replace`.
 - The package `mdesc` should be installed and can be installed using the following command: `ssc install mdesc, replace`.
 - The package `ranktest` should be installed and can be installed using the following command: `ssc install ranktest, replace`.
 - The package `reghdfe` should be installed and can be installed using the following command: `ssc install reghdfe, replace`.
- The program Stata `dr_main.do` calls `uwm_master.m`, which was run in MATLAB R2022b but should equally work with older versions of MATLAB. `uwm_master.m` calls the objective function `uwm_obj.m`.

Controlled Randomness

- Random seeds are set at:
 - line 80 of program `dr_main_bs.do`
 - line 118 of program `dr_appendix_bs.do`

Memory and Runtime Requirements

Summary Approximate time needed to reproduce the analyses on a standard 2024 desktop machine:

- 10 hours

Details The code was last run on an Intel-based MacBook Pro (2020 version, 2.0GHz quad-core 10th-generation Intel Core i5, Turbo Boost up to 3.8GHz, with 6MB shared L3 cache) with MacOS version 10.15.7.

Description of programs/code

- Programs in the folder `main/` generate all tables, figures and results in the main text. The file `main/dr_master.do` runs all executable files within this folder.
- The folder `data/` contains all the data files to run the code
- The folder `data/temp` contains all temporary data files that are internally generated by the code.
- The folder `ouput/` contains all output files used in the manuscript.

Instructions to Replicators

All output used to write the manuscript can be generated using the following steps:

1. Edit `/main/master.do` to adjust the default path
2. Run `/main/master.do`

Details

- `dr_master.do`: This is the master do-file that calls all the other programs.
- `dr_main.do`: This is the do-file that provides the analyses presented in the main text.
 - This do-file also calls the MATLAB code `uwm_master.m`, which is used to calibrate material and capital prices.
- `dr_appendix.do`: This is the do-file that provides the analyses presented in the appendix.
- `dr_data.do`: This is the do-file that prepares the data files for analysis.

- `dr_figures-descriptives.do` This auxiliary do-file generates various descriptive graphs and tables throughout the manuscript.
- `dr_redform.do` This auxiliary do-file provides the additional reduced-form evidence referred to in our manuscript.
- The standard errors are bootstrapped in separate do-files, that carry the same name as the file they are providing the bootstrapped standard errors for, but with ‘_bs’ added. Specifically, we provide:
 - `dr_main_bs.do`
 - `dr_appendix_bs.do`
- The number of bootstrap iterations is defined as $B=200$ in `dr_master.do` on line 7. In each of the bootstrapping do-files, the seeds are set equal to ‘b’ for each iteration $1 < b < B$, with ‘b’ being the number of the bootstrap iteration.
- `uwm_master.m`: This MATLAB code is called by `dr_main.do`. `uwm_master.m` calls the objective function `uwm_obj.m`.

List of tables, figures and programs

The provided code in this replication package produces the following:

- All numbers provided in text in the paper
- All tables and figures in the paper, as summarized below:

Figure/Table #	Program	Line Number	Output file
Figure 1a	dr_redform.do	39	fig_lqemp.pdf
Fig. 1b	dr_redform.do	64	fig_csl.pdf
Fig. 2	dr_redform.do	98	fig_cartel.pdf
Fig. 3	dr_main.do	1618	fig_md1.pdf
